WIRELESS BROADBAND GAMING SYSTEM AND METHOD

ABSTRACT

A wireless broadband gaming system and method is described. The wireless broadband gaming system comprises a wireless network access device and a gaming system. The gaming system includes a registration database, a verification system, a video server and a gaming server. The video server stores images corresponding to at least one particular game outcome. The gaming server generates a random game output that associates the random game output with at least one particular game outcome. The gaming server communicates the images corresponding to the particular game outcome to the wireless network access device after verifying the wireless network device is a secure device and after verifying the user has registered.

CROSS REFERENCES TO RELATED APPLICATIONS

This patent application is a continuation of patent application 09/899,559 having a filing date of July 5, 2001, now abandoned, that is related to provisional patent application 60/266,956 filed on February 6, 2001.

BACKGROUND

1. Field

The present invention is a wireless broadband interactive gaming system and method. More particularly, the wireless broadband interactive gaming system and method operates in a networked environment that interfaces with a gaming server and a video server.
